

# SDG Corporate Statement

We are committed to... And usually this is how ESG statement starts.

In 2021 we assumed:

*"The EU2030 climate targets and the United Nations Global Compact, delivers the basis for one of the most ambitious challenges that we will face in the next years.*

*More than just targets to accomplish, sustainability agenda is a huge opportunity for the development of our society.*

*At CMAS we work and believe on technological and digital approaches that are key drivers to assist companies, regulators, governments and the overall society to rebuild and transform the economy and to create a better world."*

At CMAS we are different, since 2001 , **we deliver** innovation and technology to our partners. Rather than just commit, we do.

We :

- *Consistently base all our actions on sustainability principles to protect our community, planet and future.*
- *Have a value chain and all processes are firmly anchored in sustainable economics.*
- *Offer innovative products that remain highly efficient throughout their service life and support a sustainable energy supply.*
- *Offer safe and healthy jobs with fair wages.*
- *Work locally to improve the social, economical and environmental well being of our community.*

- *Make sure that all our valuable workers have afforded excellent working conditions and are treated with dignity and respect.*
- *Deliver in a way that minimizes the environmental impact and promotes business integrity.*
- *Comply with the recognized international social and environmental standards (according to the United Nations Global Compact) and our partners are aware of our sustainability objectives.*

We strongly believe that : Business cannot succeed in a society that fails. It is in our power to make it happen

That's CMAS. We Deliver.
